Demonstration: Go With the Flow – Jazz Up Your Turnings With Pour Paint Techniques

Overview

This is not just a demo but a mini-workshop with hands on practice for up to 9 of the people in attendance. It not only shows how to use pour paint techniques, but helps them overcome the annoying and often frustrating experiences associated with the front end of the learning curve. Included are an introduction to materials and alternatives, explanation of methods and challenges, samples to illustrate results, a live demonstration and hands-on experience.

The process known as a "dirty pour" is thoroughly introduced and used as a spring board for further exploration. Because each piece is the unique result of many factors, the hands-on participants broaden the experience for everyone.

No lathe is required. An HDMI capable monitor is required for the best learning experience. All materials and supplies are provided.

Additional hands-on participants may be accommodated with prior coordination.
